Periodic assessment
system with more than 400
international experts

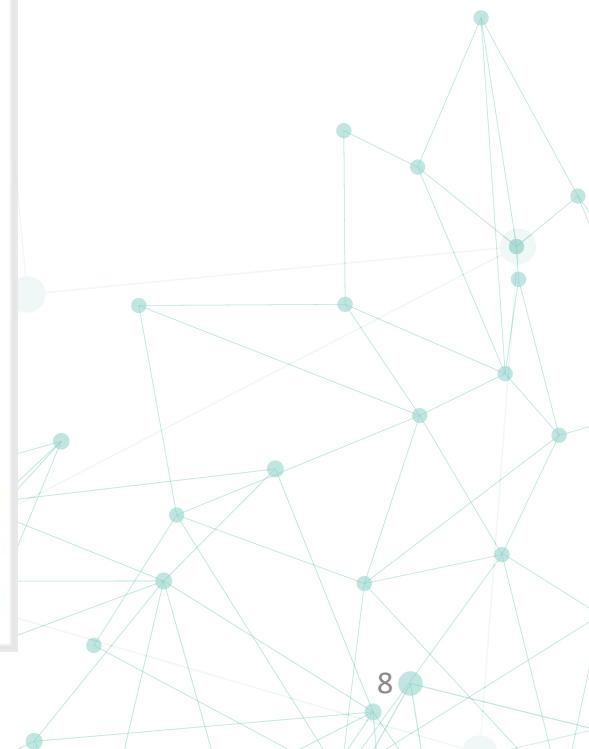

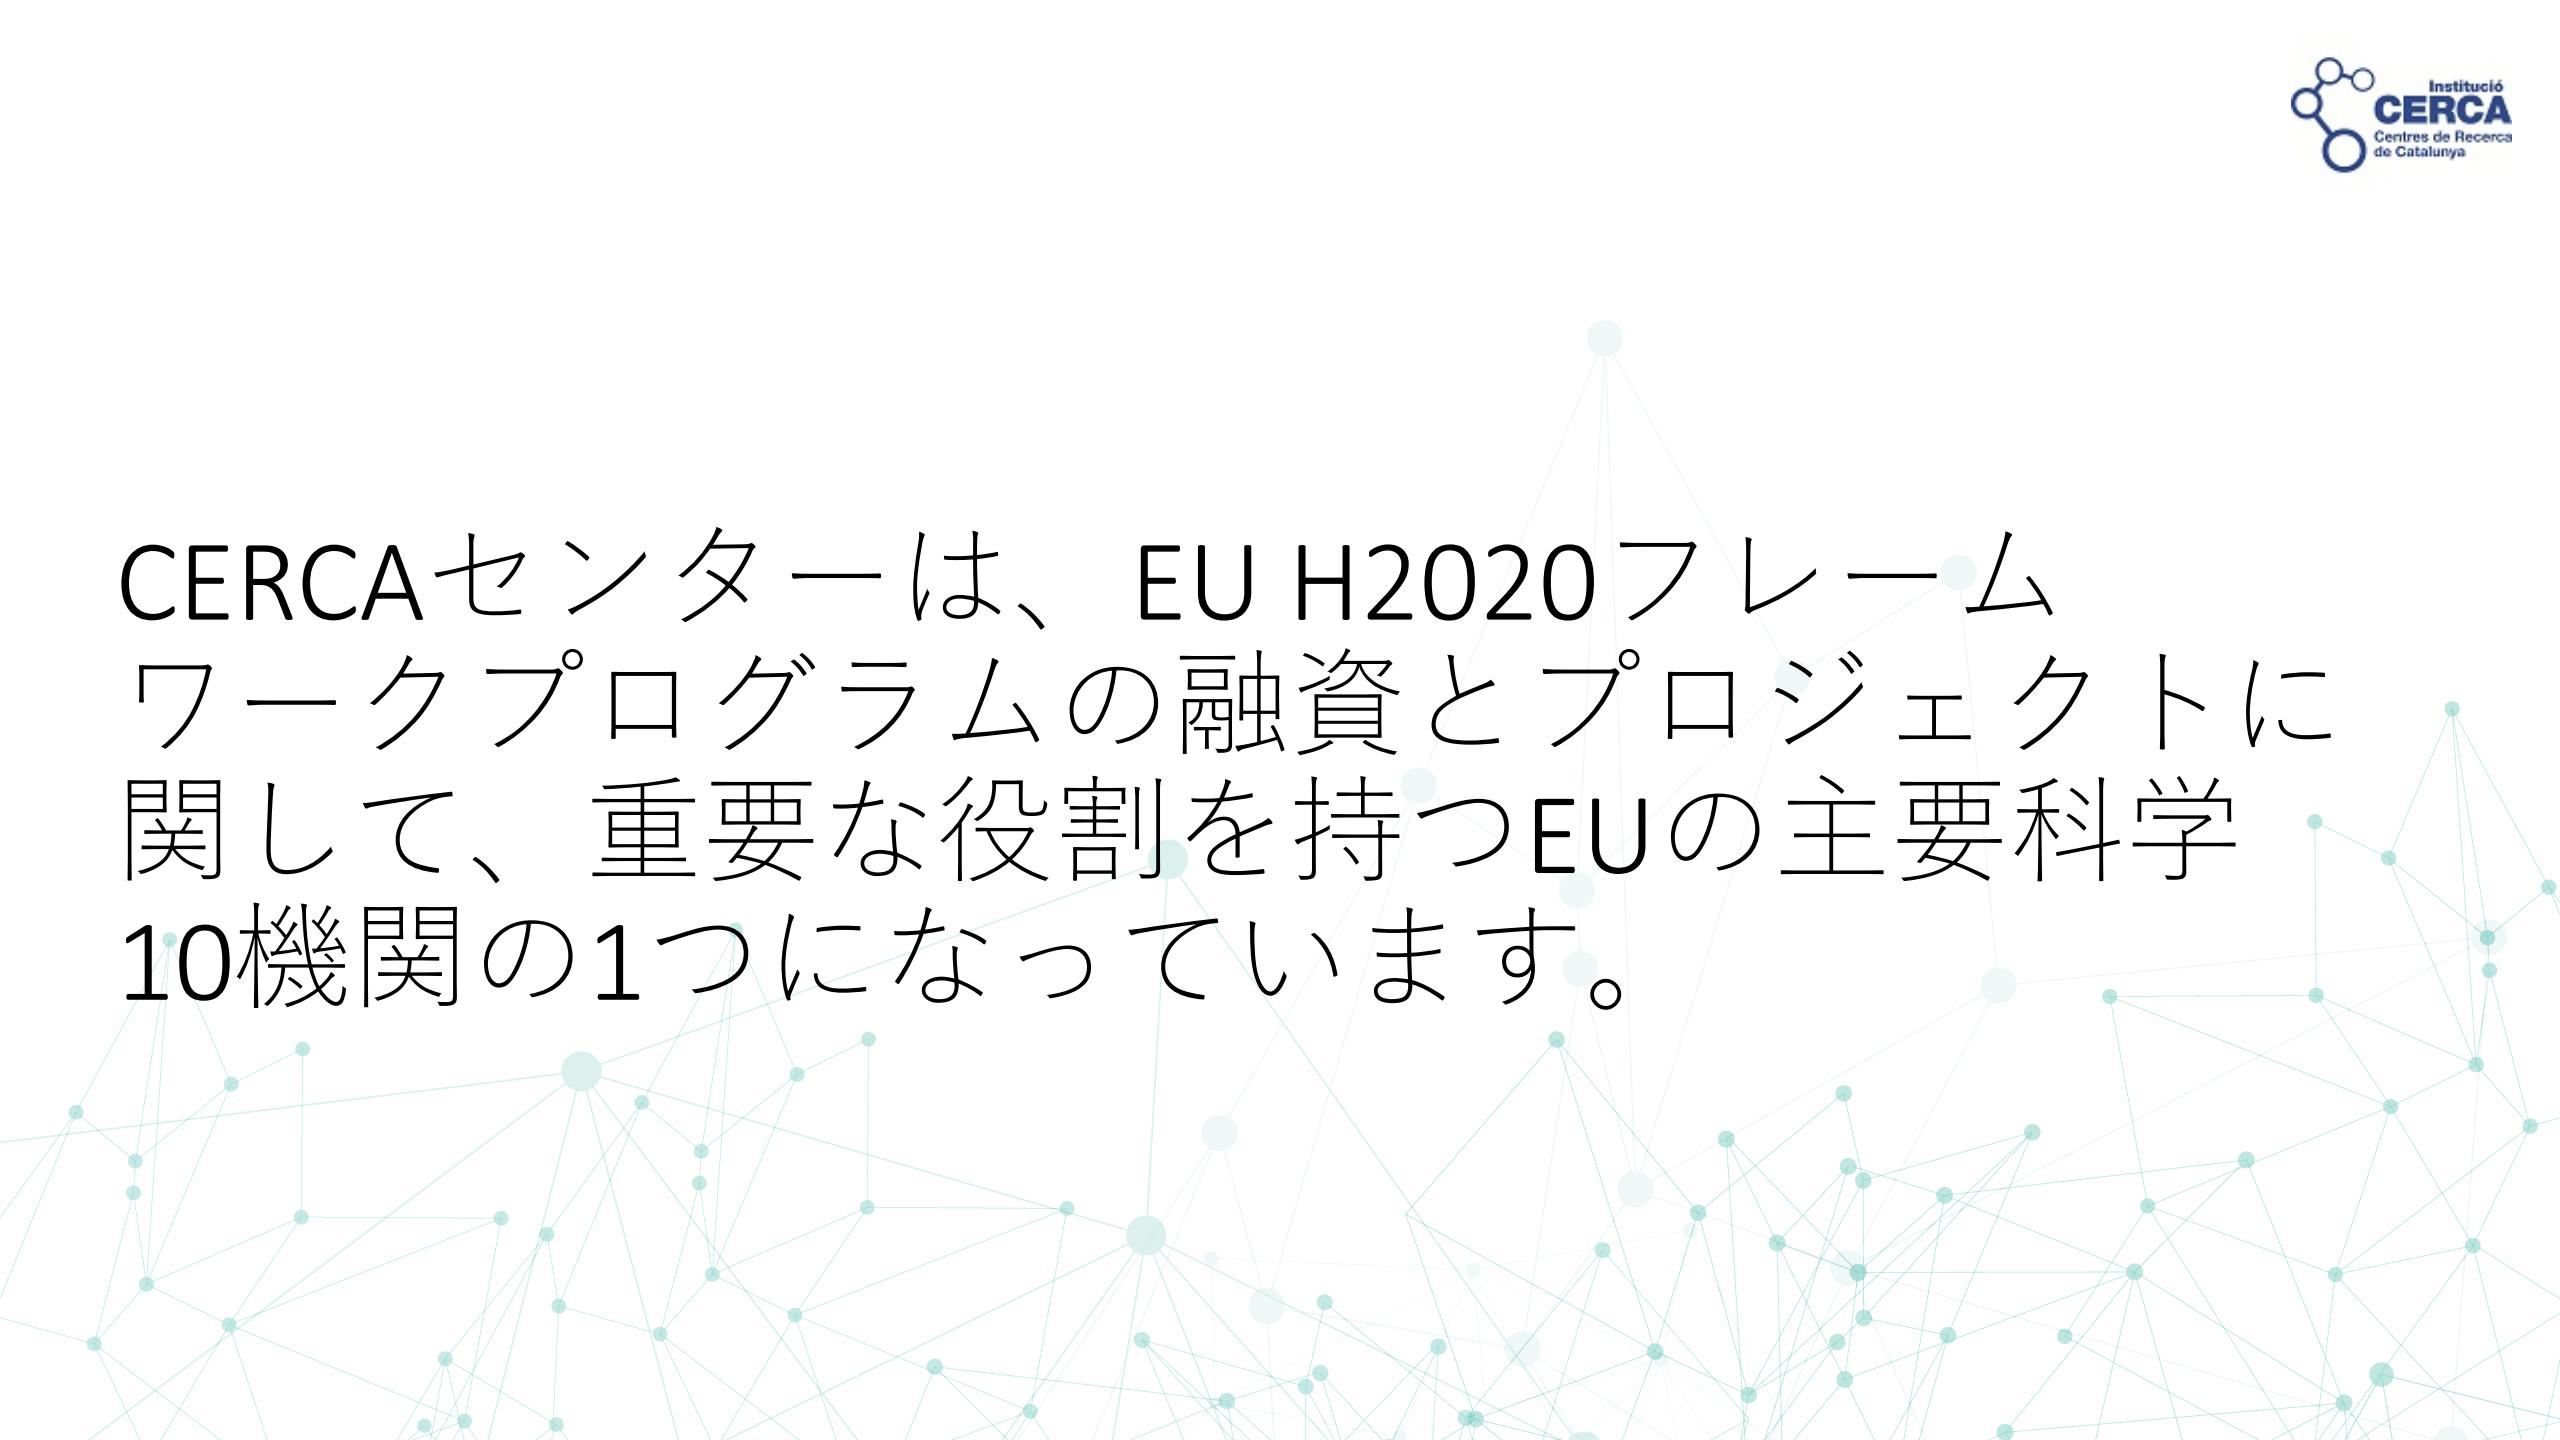

October 23, 2018

Researchers from IDIBAPS and CRG, awarded with an ERC Synergy grant to unravel chronic lymphocytic leukemia

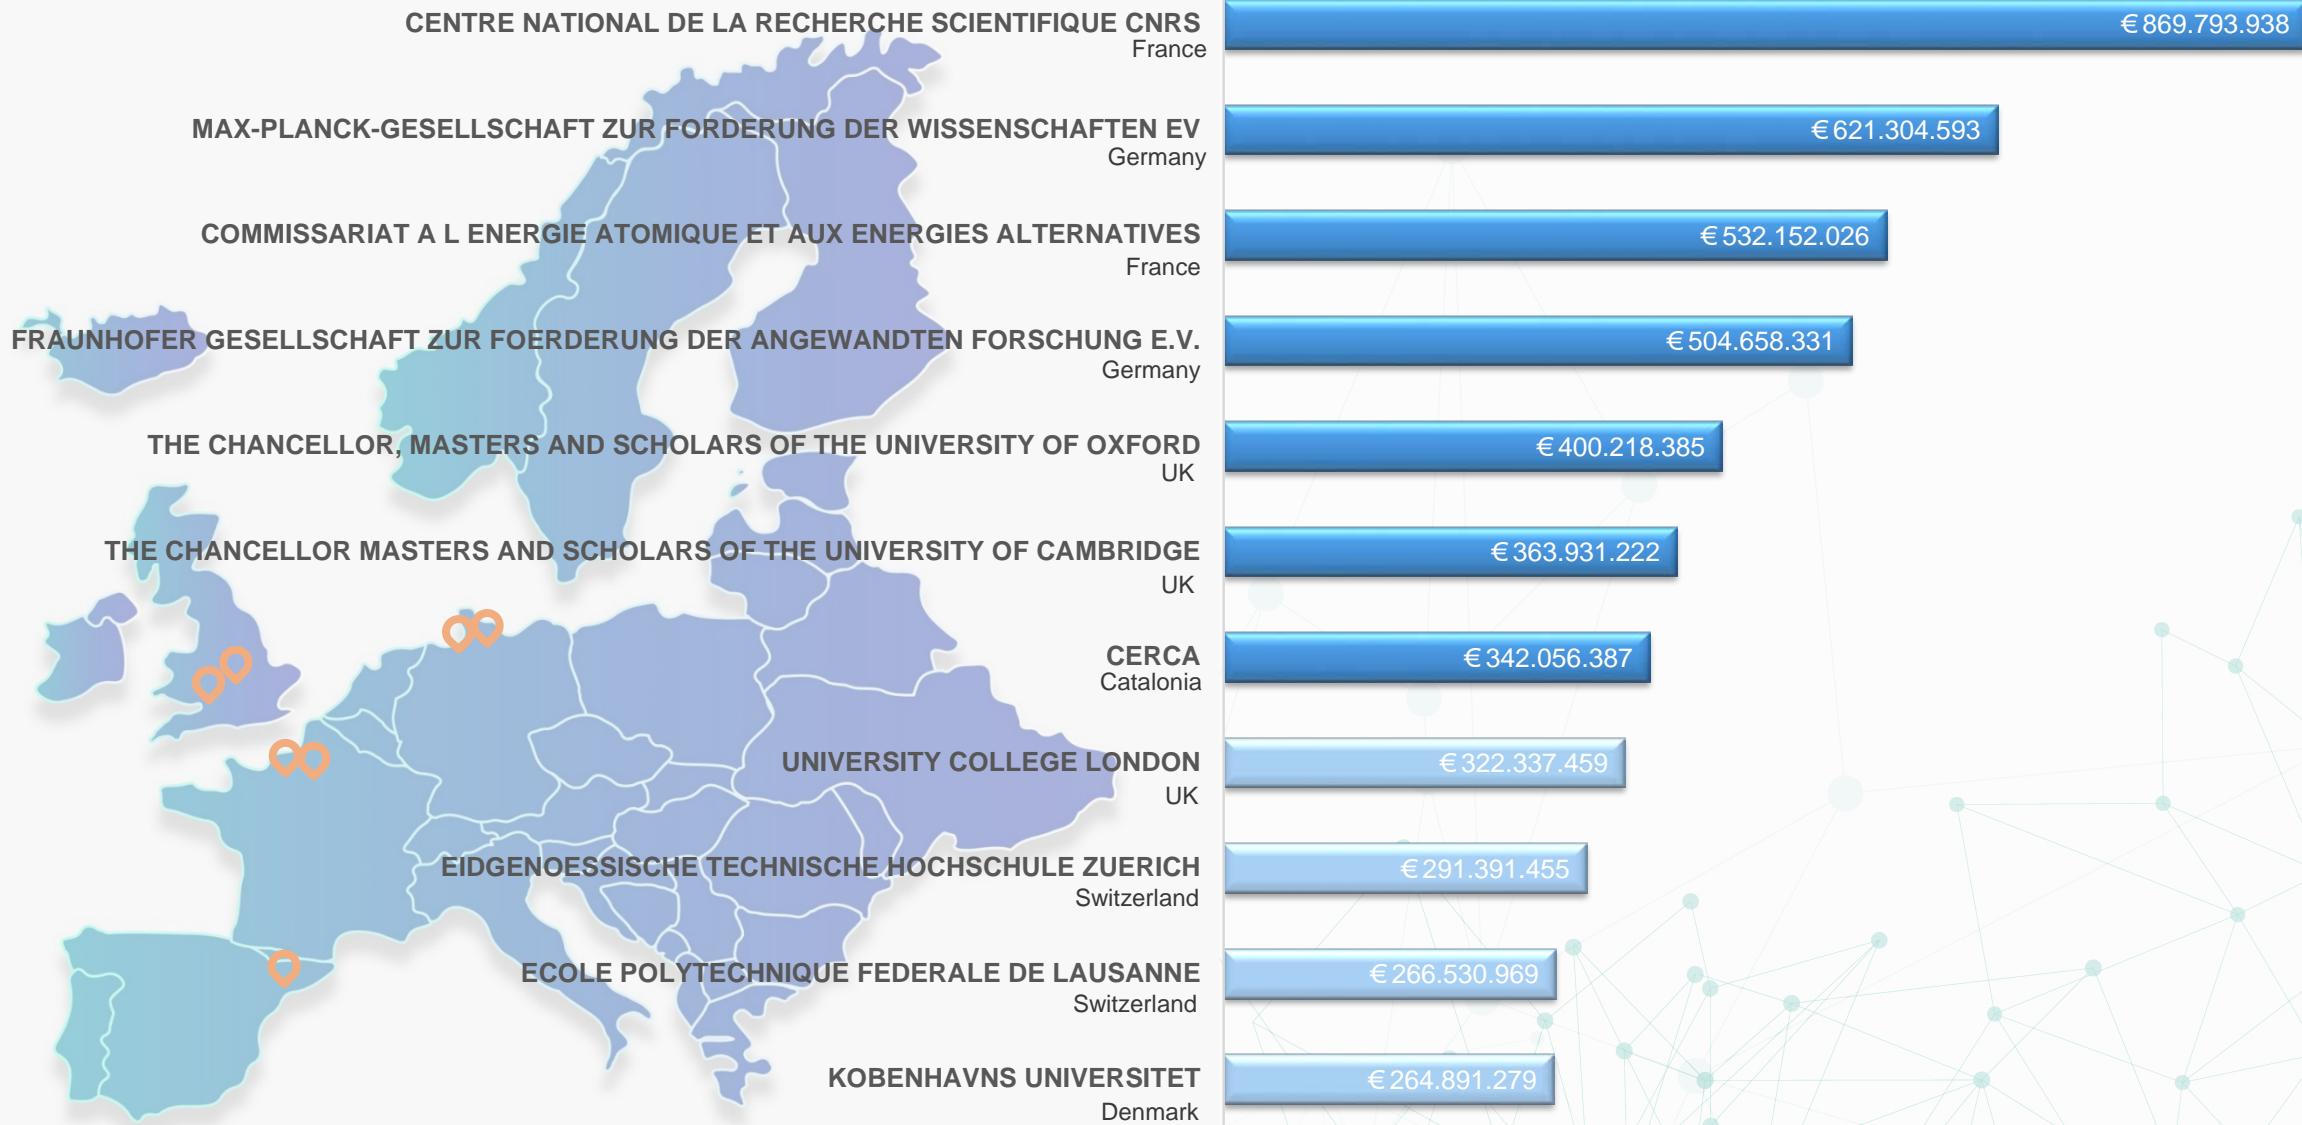

The European Research Council (ERC) today announced the results of the 2018 Synergy Grants call for proposals. The aim of Synergy Grants is to address ambitious research questions that can only be answered by the coordinated work of a small group of two to four principal investigators and their teams, bringing together their complementary skills, knowledge and resources. The ultimate goal of the scheme is to give support to a close collaborative interaction that will enable transformative research at the forefront of science, capable of yielding groundbreaking or even unpredictable scientific results and/or cross-fertilizing disciplines.

CERCAセンターは、EU H2020フレームワークプログラムの融資とプロジェクトに関して、重要な役割を持つEUの主要科学10機関の1つになっています。

CERCA evaluation

CERCA evaluation

The periodical assessment of the activity and operation of any system is an essential mechanism for defining and applying policies based on strategic planning.

In the case of research centres, assessment is a fundamental practice, habitual in the world's most advanced and renowned systems. International standards are well defined in this respect and assessments are usually carried out by an independent panel of renowned experts.

Following a mandate from the Catalan Parliament and, subsequently, from the Government, the CERCA Institute has coordinated the assessment of CERCA research centres with the aim of analysing fulfilment of each one's mission in the last three years. As a result of this action, undertaken between February 2012 and December 2013, more than 500 high added-value recommendations were made to be applied mainly by the management of each centre in the next four years, before the next assessment.

Impacts from CERCA

- CARLA: democratising autonomous driving with an open source Simulator. CVC
- Positive response of cardíac patients to a bioengineering implant designed to repair heart tissue. IBEC
- (Nano)capsules for a more aromàtic laundry. ICN2
- Full or near complete recovery of autoimmune encephalitis
- Yaws, from finding a treatment in a remote island to potential elimination worldwide
- Improving people's well being in Health and work places with smart spectrally tunable lighting system

Open access availability of Catalonia research output: Case analysis of the CERCA institution, 2011-2015

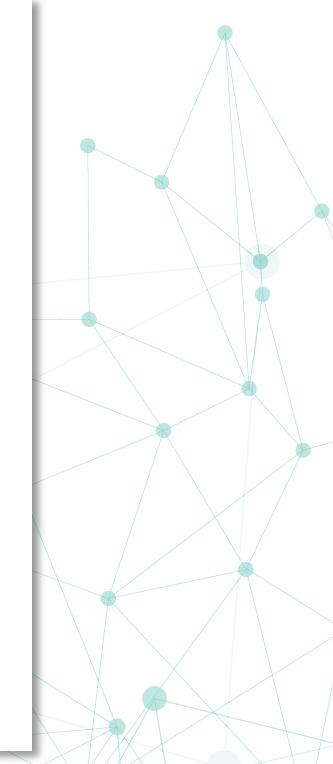

Anna Rovira , Cristóbal Urbano , Ernest Abadal 

Published: May 7, 2019 • <https://doi.org/10.1371/journal.pone.0216597>

4 Conclusions

The CERCA centre network provides Catalonia with powerful research infrastructure, as it has achieved high levels of scientific output and attracts a great deal of research funding.

Based on a sample of 3,730 articles published by CERCA's researchers between 2011 and 2015 our findings indicated that 75.8% of the articles were available online in open access format, applying the broadest definition of open access. Regarding the articles found in open access according to thematic areas, all six areas (science, life sciences, medical and health sciences, engineering and architecture and humanities) exceeded 70% of articles in open access. When only articles in repositories or open access journals were taken into account, just 52% of the scientific output was openly available.

The Government approves the creation of the CERCA Institution.
