

Graphene Flagship: bridging research to industry – innovation outlook

Kari Hjelt

Chalmers Industrial Technic, Sweden

kari.hjelt@cit.chalmers.se

The Graphene Flagship's principal mission is to take technologies based on graphene and related materials from the laboratory to commercial applications. With this quest innovation has become a key focus of the Flagship.

In the next phase we continue to move from materials research towards component development and system-level integration. Our focus is in combining technology push and market pull by working with industry stakeholders to increase technology readiness levels.

The business development actions and overview of the innovation framework in the Graphene Flagship is given. The most promising application areas are also discussed.
