Abstract

STANDARD GRAPHENE, headquartered in South Korea, is a company that specializes in mass producing high quality GO & rGO graphene and application products. Based on its 22 years of intensive research on Carbon Nano Tech field, STANDARD GRAPHENE is considered to be one of a few companies in the world who can mass produce high quality graphene at this moment. With more than 100 global partners across many different industries such as aerospace, automobile, water purification, military, STANDARD GRAPHENE has been developing more graphene application products than anyone else. Now the graphene market is at the point of explosion and STANDARD GRAPHENE is the absolute forerunner in this battle. Lee Joung Hoon, the CEO & Founder of STANDARD GRAPHENE, will be introducing the technology of STANDARD GRAPHENE and some of its impressive graphene application products which are ready for the commercial market.
