

NoCanTher: Nanomedicine Upscaling for Early Clinical Phases of Multimodal Cancer Therapy

O Ibarrola, I Gamboa, M Pastor, C Vairo, A Arbona, E Gainza

oibarrola@praxisph.com

BIOPRAXIS faces drug development for rare cancers, including glioma and pancreatic cancer, using nanotechnology and biological molecules like proteins and peptides. Moreover, is also working in controlled release systems through nanoparticles, which improve therapeutic action of APIs and allow protection of biological molecules and targeting. BIOPRAXIS and some European Entities have worked previously in this area in projects as THERAGLIO project (Contract n FP-602923), MULTIFUN a finished FP7 project and HEATDELIVER: Heat and Drug Delivery nanosystem with active tumortargeting features (Eurotransbio project). Based on the knowledge obtained, project NoCanTher (H2020-685795) aims at translating one of these nanoformulations to early clinical development for pancreatic cancer. The therapy is based on the functionalization of iron oxide nanoparticles using a targeting peptide and anti-cancer drugs, together with the effect of hyperthermia generated by an external alternate magnetic field. To successfully reach this objective, we will concentrate our efforts in two main groups of activities:

- Nanomedicine up-scaling under GMP conditions: NoCanTher will scale up the manufacturing of the proposed nanoformulation from milligram-scale laboratory synthesis up to multigram-scale production to generate sufficient material

for clinical and regulatory assays. To this aim, a GMP production line will be optimised and the relevant quality control will be conducted at the different stages of the up-scaling process.

- Clinical trial: NoCanTher will include late preclinical parameter testing to raise a clinical treatment protocol, regulatory assays, as well as the design of the clinical trial and the preparation of the Investigational Medicinal Product Dossier (IMPD). This strategy will allow us to apply for Clinical Trial Authorisation (CTA) then, we will carry out a Phase I clinical trial. NoCanTher involves the participation of institutions from three different sectors (academia, industry, clinical) and from five different countries (Ireland, France, Germany, Spain and the UK).
