

Group-IV materials for quantum electronics

S. De Franceschi

Univ. Grenoble Alpes & CEA, IRIG/PHELIQS, Grenoble, France
silvano.defranceschi@cea.fr

Silicon and group-IV materials in general have been instrumental in the development of information technologies. In this talk, I shall discuss the state-of-the-art and prospects of group-IV materials in the emerging context of quantum information technologies. In particular, I intend to offer a view on spin qubits and hybrid superconductor-semiconductor devices for quantum information processing.
