Abstract

In the rapidly evolving landscape of global travel technology, ensuring safety and security for millions of users is of utmost importance. Booking.com, a leading platform in this domain, employs cutting-edge machine learning (ML) techniques to proactively identify and prevent malicious activities, prioritizing the protection of customers, partners, and stakeholders. This presentation explores real-world scenarios, providing insights into the development and deployment of ML models for fraud prevention and safety assurance. Join us to delve into the intersection of machine learning and security in the travel technology sector.
